

TA Digital Ascent is a proprietary product of TA Digital and a proprietary tool of TA Digital's employees. It is an eCommerce Web Application based on industry-leading practices. TA Digital Ascent works to integrate key Adobe Marketing Cloud applications, including Adobe Analytics, Adobe Experience Platform (AEP), Adobe Sensei, Adobe Experience Manager (AEM), Customer Journey Analysis (CJA), Adobe Commerce, Marketo with Adobe Analytics, Adobe Journey Optimizer (AJO), Adobe Launch/Data Collection, and Adobe Target. TA Digital Ascent is a software package pre-made by TA Digital to provide standard client eCommerce services. Then, for any project, TA Digital engineers apply TA Digital Ascent to meet client eCommerce needs. It is the company's key competitive advantage in providing Adobe-related eCommerce consulting services because it allows the company to jumpstart client projects with readymade software while simultaneously allowing the creation of highly customizable software for the specific business needs required by end clients. Among the components of TA Digital Ascent are an eCommerce AEM web application, an eCommerce Connector, and a digital marketing connector.

- At TA Digital India, the Beneficiary began working on the project in March of 2022 and has a high level of expertise in the overall project architecture, solution design, system integration documentation, and developing project technology strategy by understanding key client objectives, diagnosing, and mapping client requirements; articulating solution risks and barriers; recommending project approaches; preparing time and cost estimates; planning entire technical project life cycle. He has also achieved a list of certifications:
 - TealiumIQ - Basic
 - TealiumIQ - Advanced
 - Tealium AudienceStream CDP - Basic
 - Tealium AudienceStream CDP - Advanced
 - Omni Foundations
 - Google Ads Display
 - Google Tag Manager Fundamentals
 - Display & Video 360
 - ContentSquare Fundamentals
 - Google Analytics IQ
 - Adobe Analytics Architect
 - AB Tasty User (Essentials)
 - Google - Fundamentals of Digital Marketing
 - Google Data Analytics Professional

His contributions to the product include working on essential and core features. His work on the system included the following:

- Extending the features and capability of the application, including but not limited to extending the eCommerce website-related features such as:

- **Audience** - Audience data gives e-commerce company owners the ability to alter how they conduct their shipping options and how they advertise based on the locations of their audience.
 - **Acquisition** - This is highly valuable to find out how your visitors found you online and how they ended up on your website.
 - **Behavior** - Behavior analytics helps clients discover the parts of their website that can enhance engagement rates and conversion levels.
 - **Conversions** - Helps clients plot what sort of discounts and deals will most appeal to their current customers.
 - **Paid Marketing Activities** - Helps clients determine their exact return on investment (ROI) for various paid marketing campaigns.
-
- Support and develop processes and documentation for tagging, testing, QA, and reporting, as well as Integrate other systems and build out the Marketing Data Stack.
 - Using AEP Real-Time CDP Capabilities, enabled organizations to streamline the data flow and create a single view of the customer to build seamless experiences across devices and touchpoints.
 - Centralizing and Standardizing customer data from multiple sources to enhance the design and deliver rich and large-scale personalized experiences across all channels and destinations, from cookie and device-based to people-based environments.
 - Manage profiles with trusted governance and privacy controls for known and unknown identifiers.
 - Manage system design, application architecture, data designs, defining content lifecycles, and setting up and deploying production environments while addressing performance and security concerns.
 - Architect software design and create system components' logical and physical design such as repository layout, server architecture, and communications frameworks.
 - Generate actionable insights and scale audiences with AI and machine learning powered by Adobe Sensei built for marketers.
 - Serve as a technical expert across teams, clients, and vendors. Work with alliances and partnerships to ensure a deep understanding of the TA Digital Ascent technologies & integrations.
 - Liaise between business units, technology, and support teams and collaborate with developers, external vendors, and subject matter experts to establish the technical vision.
 - Aid in strategic sales efforts from a technical perspective. Suggest alternative technical solutions to meet client requirements more efficiently with more excellent reusability and longer life.

- Support business practices and lead data integration efforts with Data Management Platforms and Customer Data Platforms (Adobe Experience Platform, Customer Journey Analysis.)
- Maintaining codebases, rebuilds, and customization by ensuring the TA Digital Ascent is up to date with all new features expected in the market, in addition to making sure Ascent is readily available for Demo if needed and updated with latest development done to cater to the customizations asked by the client.
- Lead the maintenance of code quality standards through code reviews and unit test coverage. Here, the Beneficiary reviewed and approved or rejected the work of other TA Digital engineers. He conducted overall code reviews for Adobe Experience Platform, Adobe Analytics, and the Ascent web application eCommerce functions by:
 - a) Running data ingestion error diagnostics to identify any incorrect mapping of fields from Source to Destination.
 - b) Performing sanity tests of source data and the data lake CDP data to ensure the code changes are working correctly without any bugs.
 - c) Reviewing Merge Policies to decide how data is prioritized to create a single profile for a customer.
 - d) Validating the content code in different variations of Adobe Target activities needed to target the audience effectively.
 - e) Validating the events/data elements/data layer on the page to identify the values parsed in analytics variables, and overall health check of the elements and values ingested, all adhering to the data governance guidelines.
- At TA Digital U.S., the Beneficiary will continue to work on and with TA Digital Ascent, utilizing the expertise in the system that he developed abroad. He will enhance the system and customize it to better meet clients' business requirements. His work on this system will include:
 - Improving the application's performance by analyzing and evaluating complex business problems of Adobe Experience Cloud Solutions (Adobe Analytics, Adobe Launch/Data Collection, Adobe I/O, AEP, CJA) and issues using data from internal and external sources and process modeling techniques to provide insights to customers.
 - Work with the analytics engineers to create, manage, and enforce digital analytics tagging standards to ensure robust and consistent TA Digital Ascent data that is captured for analysis.
 - Integrating TA Digital Ascent eCommerce features with various vendors and performing Security Assessments for third-party tools onboarding by:

- a) Developing custom solutions using JS, within the system for tracking user behavior and sending the data to web analytics tools to build added analytics reporting capabilities.
- b) Building Multi-Tenant Analytics - An analytics platform built on a multi-tenant architecture that delivers dashboards and reporting capabilities to multiple end users, also known as tenants.
- c) Perform data analysis, forecast, and provide data visualization/dashboards to businesses using web analytics tools like Google Analytics, Adobe Analytics, ContentSquare, Datorama, Power BI, Looker Studio, etc.
- d) Enable real-time integrations of Adobe suites into TA Digital Ascent across the MarTech stack and create operational marketing efficiencies.

CLIENT CONSULTING SERVICES: (Utilizing TA Digital Ascent)

- Lead pre-sales support activities like requirements, feasibility, scoping study, implementation effort estimation, and preparation of Statement of Work.
- Refine, evaluate, and debug the TA Digital's client solutions to tailor them to unique contexts.
- Transform qualitative and quantitative data into actionable recommendations and KPIs; collaborate/communicate across business & analytics teams.
- Coordinate data integration projects generated audiences' capabilities that connect online behavioral data with offline transaction data to build context-based audiences for effective targeting.
- Prepare a timeline for the project delivery plan based on the required functionalities to be developed.
- Connect with clients having similar requirements for their e-commerce websites and able to deliver a customized solution built on top of this tool as per their needs.
- Key focus on consulting with engineers and clients, providing solutions to issues with Implementation, and tracking/analyzing web/mobile traffic.
- Leverage the available services from this add-on packages and sometimes even customize them to be able to deliver business requirements.
- Provide Technical consultation and solutions on Adobe Experience Cloud components like Reports & Analytics, Report Builder, Ad Hoc Analysis, Audience Manager, Analysis Workspace, Data Warehouse, Adobe Launch, Target, Campaign, Media Optimizer, Experience Cloud, Mobile SDKs, Adobe I/O, Adobe Experience Platform, Adobe Journey Optimizer (AJO), Customer Journey Analysis, etc.
- Participate in design meetings; Discuss the requirements in detail and decide on whether the ask is doable, or it needs further refinement.
- Provide inputs to the team members for what other skills and resources would be required to deliver the solution.

- Conduct Knowledge sharing sessions for team members and train the new hires on an entire stack tools & technologies needed for TA Digital Ascent
- Create and manage solutions end-user documentation and operational procedures for TA Digital Ascent Go-To-Market strategy.

INTERNAL SYSTEM DEVELOPMENT: (Utilizing TA Digital Ascent)

- Analyse, design, develop, deploy, and monitoring of AI/ML solutions.
- Lead solutions on behalf of clients, develop, and improve models for business solutions and overall efficiency.
- Transform qualitative and quantitative data into actionable recommendations and KPIs; collaborate/communicate across the business.
- Develop & use the analytics APIs and automation tools for analytics reporting that includes integrations with platforms like Tealium API, Google Analytics API, Adobe Analytics API, AEP RESTful APIs, etc.
- Enable personalization by creating Adobe Target activities to target the audience effectively, develop tests, build visitor profiles, and deliver relevant content.
- Design and execute omnichannel tests, create audience segments, and target content that delights customers with highly personalized campaigns.
- Enforce performance improvements to increase the speed and responsiveness of client websites, by using optimized code.
- Activate audiences by using Adobe Real-Time CDP to a large ecosystem of partners:
 - a) Adobe Experience Cloud like Advertising Cloud, Audience Manager, Campaign, Target, Marketo
 - b) Third-Party or applications.
- Combine analytics and operational capabilities into a single platform to reduce latency using AEP. Run custom models and utilize Intelligent Services to configure pre-built models to calculate scores and enrich customer profiles.
- Keyword optimization: Boost search keywords results on TA Digital Ascent by grouping, segmenting, and organizing keywords into tight groups that are semantically related to:
 - a) Improve the Click-Through rate on the searcher's query.
 - b) Improve relevance.
- Integrate TA Digital Ascent data sources with other BI tools and transform large data sets to provide statistics to the business using data analysis, ingestions, modeling, and mapping.
- **Manage Code Quality:**
 - Fix development bugs and work on the enhancement of developed features by enabling more functionalities.

- Peer review other developers' code and perform unit tests of individual functionalities to identify any missed test cases during development.
- Perform root cause analysis of development or critical bugs reported by business to identify why it was not caught in preliminary testing and how can it be fixed quickly to unblock business functions.
- **I have extended TA Digital Ascent by:**
 - Converting marketing activations use cases to technical specifications on CDP by scoping gap analysis, solution design, and mapping functional and non-functional requirements.
 - Developing strong recommendations, proposals, and Scope of Work documents.
 - Helping customers understand CDP's capabilities and the transformative power of digital marketing.
 - Designing & Developing:
 - a.) CDP Data flow specs, define data transformation rules as per the business logic.
 - b.) Queries, aggregations, Segments, Audience activations, and BRDs for customer journey orchestrations.
 - c.) Data Architecture artifacts [Data Model, ERD, Data Dictionary, Data Exchange Specs, etc]
 - Leveraging continuous integration and robust build/test automation, with a preference for cross-platform stacks (Jira, Git, and Jenkins).
 - Improved the code quality by keeping it updated with all the service references and removing deprecated library references, which may cause the application to break in the future.
 - Liaising Business, Delivery, and Marketing Enablement teams for the successful delivery of various initiatives.
 - Conducting POCs and creating actionable Solution Designs spanning across multiple Marketing tools and technologies like Adobe Experience Platform (AEP), Customer Journey Analytics (CJA), and Adobe Journey Optimizer (AJO) including complementary platforms like Salesforce and ServiceNow.
 - Engaging with business and technology leaders to understand strategy, articulate solution options, evaluate trade-offs, and influence critical decisions. Map business and technology capabilities to marketing platform features and other best-of-breed vendor solutions.
 - Testing A/B and Multivariate tests, experiments design, the mathematics of statistical hypothesis testing coupled with the ability to draw meaningful business insights across multiple tests.
 - Demonstrated success in engaging business partners in a consultative manner and turning business concepts into well-designed technology solutions.
 - Loading data in and out of CDP from Data Lake/S3/Snowflake.
